

TreeGrid specific

```
<?xml version="1.0"?>
```

```
<rows parent="0">
```

 top xml tag, mandatory

```
<row id="11" expand="1">
```

 expanded row

```
<cell image="some.gif"> first column data
```

 custom image for tree cell

```
</cell>
```

```
<cell> second column data </cell>
```

```
<row id="110">
```

 sub row

```
<cell> first column data </cell>
```

```
<cell> second column data </cell>
```

```
</row>
```

```
</row>
```

```
<row id="12" xmlkids="1">
```

 row has not loaded sub-rows

```
<cell> first column data </cell>
```

```
<cell> second column data </cell>
```

```
</row>
```

```
</rows>
```

cell represent cell of grid, supports all attributes used in plain grid

Attributes

image image which will be used for related tree cell of row

row tag represent row of grid, one tag for each row
supports all attribute of normal grid + two additional

Attributes

expand branch will be expanded on load, attribute need to be skipped if you want to have closed branch

xmlkids used in dynamical loading mode only,
attribute states that there are some sub-rows exists, but they not loaded yet,
component will send additional request on item opening, to fetch additional data

rows just top xml tag, has no special meaning

Attributes

parent used in dynamic loading only
attribute contain ID of element for which data in XML must be attached as child rows
"super root" item has ID = 0
